

Space-saving search cabin

Search cabins are only used a couple of times a day. That's why they are often considered a waste of space. INTOS developed a solution that offers optimum functionality and saves space: the Space-saving search cabin.

Using the Space-saving search cabin

The Space-saving search cabin takes up only 18 cm in stored position. When the search cabin is needed, the employee easily unfolds the search cabin within seconds. The search cabin contains a curtain for privacy, chair, coat rack and shelf. According to client's requirements, the following parts can be customized: front panel, curtain and signage. The cabin is compliant to fire resistance class EN B501 and B s1-d0.

Options

- ▶ Cabin roof (to prevent look-in from above)
- ▶ Frame for free standing (when no wall mounting is available).

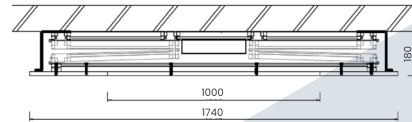

Logistics & installation

The Space-saving search cabin will be shipped crated and includes a clear installation manual. Therefore, it can be installed easily by the airports' technicians on an existing construction wall. On request the cabin can be installed by INTOS' own technicians.
