

Hybrid

Multifunctional self-service counter

INTOS introduces the new full fledged Hybrid Self Service Bag Drop. This self-service platform concept enables the seamless transition from a traditional check-in infrastructure to a stand-alone self service platform for passengers. The HYBRID self service check-in is designed to be used as either a traditional or self service bag drop (SSBD) counter. A check-in agent can switch the HYBRID counter between a traditional or self-service mode in an instant.

Award winning design

The HYBRID counter features the award-winning Smart Path TS6 kiosk. This cleverly designed and highly customizable device can be used for various applications. Therefore, the HYBRID counter offers a high level of flexibility and is a future-proof solution. The TS6 kiosk is easy to use and can be supported through a flexible global service model. This provides business continuity and monitoring to support airport operations.

Smart service-oriented and sustainable design

Durable materials and smart engineering make the HYBRID a state-of-the-art counter solution. Its distinctive design is based on accessibility, service and ergonomics. It also has a flat frontal surface that offers a passenger-friendly solution. The front panel of the HYBRID is made of sturdy surface that is hard-wearing, highly resistant, antibacterial and requires minimal maintenance. The counter design also supports its function; no additional connection space is required for installation.

Features & benefits

- ▶ Hybrid counter with versatile and modern design
- ▶ Compact, space saving, solution in design and integration
- ▶ Safe and secure self service bag drop solution
- ▶ Maximum flexibility in baggage drop process
- ▶ Seamless integration with airport baggage handling system
- ▶ Natural wayfinding, where it is visually clear if the counter is to be used as a self-bag drop
- ▶ Customer friendly design with flexible branding options

Traditional counter in HYBRID design

INTOS understands that airports do not change their operations overnight. That is why INTOS offers the HYBRID-ready as a traditional counter in the same eye-catching design. The flexible HYBRID-ready can be transformed into the full HYBRID at a later stage, with little impact on operations and without replacing the entire counter.
